

# 24/7 MEDICAL & AVIATION SECURITY INFORMATION & ANALYSIS

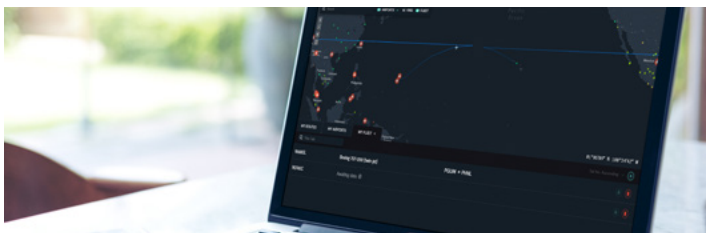

## 360° OF MAP-BASED RISK ANALYSIS

The all new MedAire360 Portal will provide access to all your MedAire services and allow program administrators to grant access to designated members of the flight department. The first phase of this portal launch is the enhanced medical and aviation security information and map-based risk analysis tool. This module provides users unparalleled access to near real-time threat information and travel, medical, and security intelligence in a single intuitive interface. In addition this portal's map-based interface provides 360 degrees of analysis by integrating flight routes, fleet tracking, airspace risk by altitude, and country, city and airport level information.

### AIRPORT RISK

The information found within the airport panel includes everything once only found in the Aviation Travel Security Brief. Using the Export function, subscribers can generate their own ATSBs. Information includes:

- Airport Risk Rating\*  
\*(formerly Go/No Go Assessment)
- Airport Security Posture
- COVID Impact Rating
- Recent Incidents
- Airport Overview
- Travel Restrictions

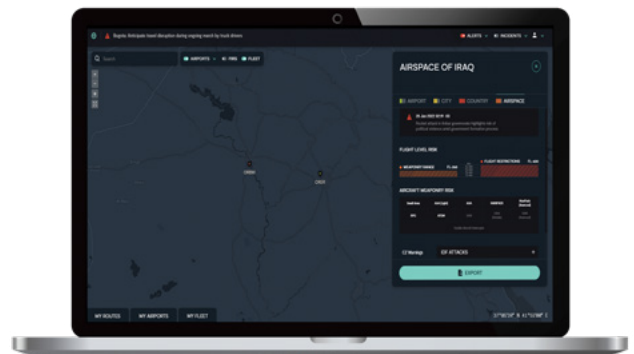

### FLEET TRACKER

Leveraging an API feed from FlightAware, users can enter in their aircraft registration numbers and track their assets directly within the portal.

### AIRSPACE ANALYSIS

The FIR layer visualises risk by flight information regions and flight restrictions or warnings that have been published by major civil aviation governing bodies. The layer provides risk rating by altitude and weapon availability, while the Airspace information panel provides further analysis that can be exported to create an Airspace Assessment.

- Flight Level Risk
- Civil Aviation Warnings
- Weaponry Range & Risk
- Recent Alerts & Incidents

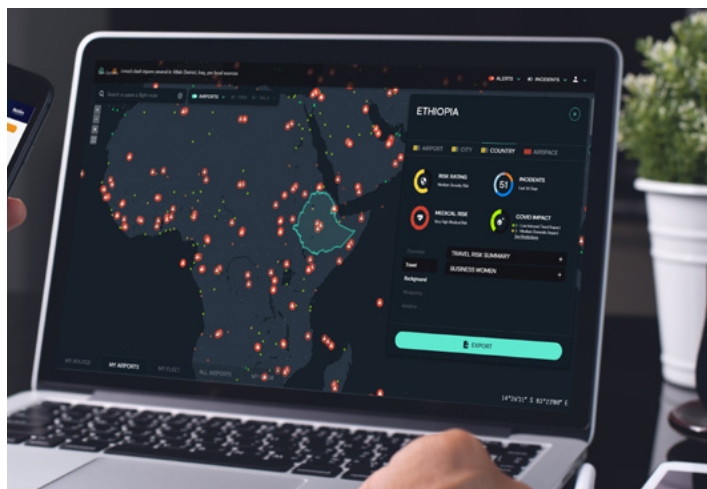

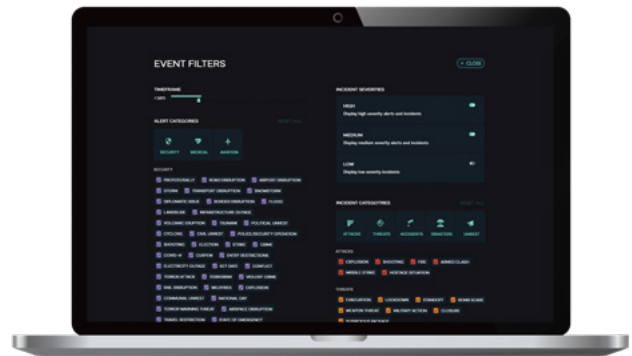

## ALERTS & INCIDENTS

Aviation, Travel Security and Medical alerts provide actionable advice and updates on verified events likely to impact operations and workforce.

Incidents powered by Samdesk, use artificial intelligence to scan more than 1.3 billion open source data inputs to detect disruptive events within minutes of occurrence.

Both alerts and incidents can be filtered to display the timeframe and categories that matter most to your operation.

- 30+ Security Alert Categories
- 5 Incident Categories
- 10+ Medical Alert Categories
- 45+ Incident Event Types

## COUNTRY & CITY GUIDES

Country, city risk, and familiarization information has been integrated into the country and city tabs within the airport panel. Information includes comprehensive medical and security guides to help plan for and mitigate risks associated travel health and personal safety.

- Vaccination Requirements
- Level of Medical Care
- Blood Supply Information
- Disease Outlook
- Emergency Numbers
- Food & Water Safety
- Cultural Etiquette
- Kidnapping Risk

## FLIGHT ROUTE VISUALISATION

Upload or manually enter flight routes to visualize the risk using a number of different threat vectors. Multiple routes can be added and saved for future use.
